1. Introduction

Risk Management is the process of identifying risks, evaluating their potential consequences and determining the most effective methods of controlling them and/or responding to them. It is not an end in itself. Rather, risk management is a means of minimising the costs and disruption to the organisation caused by undesired events.

The aim is to reduce the frequency of risk events occurring (where possible) and minimise the severity of their consequences if they do occur.

2. The Process

To manage risk effectively, the risk associated with each policy option or service delivery method needs to be systematically identified, analysed, prioritised, controlled and monitored. This process is referred to as the risk management cycle, which can be seen below.

2.1 Risk identification

The first of five stages of the risk management cycle requires risk identification. This is achieved through standing items on Corporate Governance Group and Management Board and from discussions at the Risk Management Group, which is held quarterly. Risk is covered under 13 categories of risk as shown below.

2.2 Risk analysis and prioritisation

Once the risks are identified, these are then assessed for impact and likelihood and plotted onto a matrix. The impact, compared against the objectives of the Authority, (Council Policy Themes and Aims), was measured as being negligible, marginal, critical or catastrophic. The likelihood, of the risks occurring over the next three years, was measured as being almost impossible, very low, low, significant, high or very high.

A group of Members and Senior Officers originally set the risk tolerance line, which involved considering each of the squares on the matrix and deciding if they were prepared to tolerate a risk in that box or if they wanted to actively manage it. This theoretical tolerance line effectively splits the risks on the matrix, with those risks above the line requiring further scrutiny and those below the line not requiring high-level intervention at this time. The Finance and Performance Management Cabinet Committee now review this quarterly.

2.3 Risk management and monitoring

The next stage is to complete management action plans. These plans frame the risk management actions that are required. They map out the target for each risk i.e. to reduce the likelihood, impact or both. They also include targets and critical success factors to allow the risk management action to be monitored.

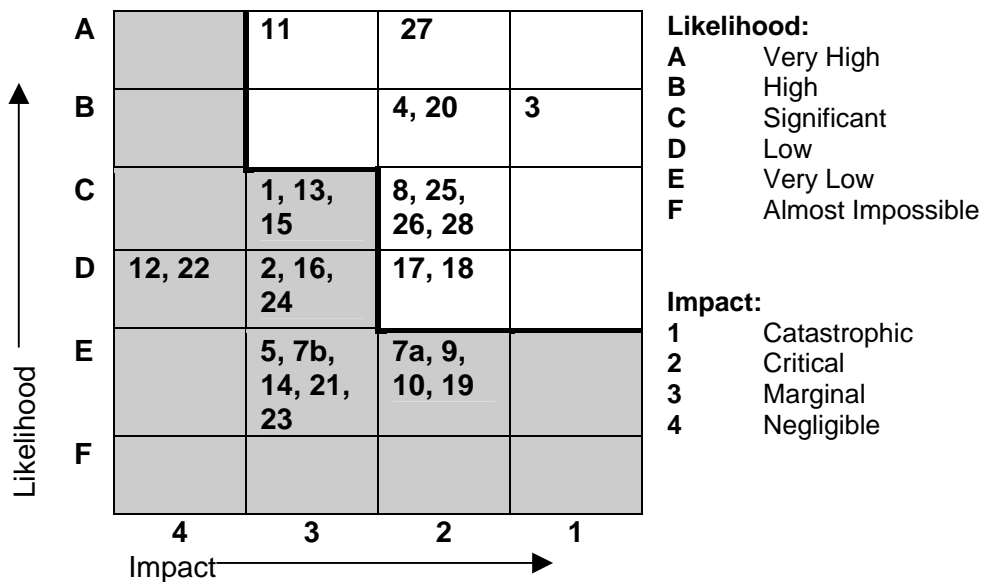

The monitoring of these action plans takes place at Corporate Governance Group, Management Board and the Risk Management Group. The action plans are also reported to Members quarterly.
